

Retailer CRM System - Task Description

Date: 09-07-2026

Task ID: 104

1. Problem Statement

A full-proof Retailer CRM System will be developed where retailers can access live product details, view live prices, and place orders directly through the website.

2. Objective

Retailers will be able to view live prices, place orders online, and see applicable discounts automatically. This will reduce manual communication and improve efficiency.

3. Expected Outcome

The system will improve transparency, streamline the sales process, reduce manual errors, and provide a better retailer experience.

4. Rules / Limitations

Only registered retailers can log in. Retailers will see only their own prices and discounts. Live pricing and stock will come from the backend. Order history and tracking will be maintained securely.

5. Final Deliverable

A complete Retailer CRM System including Retailer Registration & Login, Product Catalogue, Live Pricing, Retailer-wise Discounts, Cart & Order Placement, Order Tracking, Order History, Query/Support Module, Location Verification (if required), Profile Management, and an Admin Panel for retailer and order management.
